Cameron Durham
1148 W 37th Place
Los Angeles, CA

Phone: 337-414-0516
Email: cdurham@usc.edu

Skills

Programming Languages: C/C++, Java, Python, PL/SQL, JavaScript

Technologies: Docker, Google Cloud, MongoDB, OracleDB, Redis

Experience

Viterbi School of Engineering / Course Producer

JANUARY 2019 - PRESENT, LOS ANGELES, CA

- designed supplemental course curriculum in algorithms and data-structures
- mentored students to improve programming and debugging techniques in a C++ based curriculum
- collaborated with staff to create Docker based development environment for students

Oracle / Software Development Intern

JUNE 2019 - AUGUST 2019, AUSTIN, TX

- created cloud-ready, Dockerized applications using microservices architecture
- engineered caching and authentication system to lower average API response times from Helidon backend using Node.js and Redis
- coordinated with remote teams to construct reports dashboard for WebCenter team

McNeese State University / Math Tutor

AUGUST 2017 - JULY 2018, LAKE CHARLES, LA

- coached students in course concepts and test strategies for undergraduate physics, calculus, linear algebra, differential equations, and discrete math courses
- organized content, meetings for Louisiana's Math Association of America competition

Education

University of Southern California / B.S. in Computer Science

AUGUST 2018 - DECEMBER 2020, LOS ANGELES, CA

McNeese State University / B.S. in Computer Science

JANUARY 2016 - JULY 2018, LAKE CHARLES, LA

Projects

Uniscript: decentralized transcript verification

- built models to import student data and populate database
- presented application, business concept at Oracle's Innovation Hub in Santa Monica
- used Oracle Cloud, Node.js, Electron, and MongoDB to create web-app

Crossword: multi-player crossword game

- implemented crossword generator using backtracking strategy
- devised and built networked crossword game with a command-line interface
- used Java multithreading and web-socket libraries to build solution
